To whom it may be concerned,

My name is Chuanqi Sun and I am the forth year student in University of Toronto. This is my application to positions in New Graduate – Developer in BMO, which are posted on Career Network in campus. I am going to graduate in May 2019.

I am mainly focus in machine learning in my bachelor study. I learned about the computer image operation, NLP and different neural networks. I finished some projects to identify objects in image and to define grammars to verify the structure of English sentences. I get familiar with Python, Java and R inside and outside the courses and projects. I also learned about computer system, database in SQL and security of information.

Not only the software and algorithm, I also know about algorithms and programming related to hardwares. I had an 16-month internship in AMD, Canada in SOC group. I finished scripts to analysis the behaviours and performance of tests in data exchange. I learned about the basic structure of the GPU and functionalities of different elements. More importantly, I started to get familiar with the environment working in a big company and keep a good relationship with my workmates and supervisors.

When I saw this job, I knew it was the perfect opportunity to offer my experience and my knowledge. I will try to catch up as soon as possible as I am a fast-learner and I am able to adapt the new environment in a very short time. Please feel free to email me or call my phone at 647-839-6370. I hope I can hear from you soon.

Thanks for your consideration!
